AFFIDAVIT OF James E. Peden

State of California]

Los Angeles County]

I, James E. Peden, attest that my statements are true to the best of my knowledge.

Comment round for ET Docket No. 03-137 and WT Docket No. 12-357.

1. My name is James E. Peden. My address is 5106 Lenore St., Torrance, CA 90503.
2. I am retired.
3. I am writing to express my concerns on the current RF safety guidelines. I believe that the current established IEEE and ICNIRP guidelines are inadequate to protect people from biological effects of long-term exposure to RF radiation.
4. I have had some unintended effects due to the current safety guidelines including trouble sleeping and headaches. These effects happened just after SCE installed a RF emitting smart meter on my house.
5. I would like it noted that the IARC of the World Health Organization has classified radiofrequency radiation as a class 2B possible carcinogen in May 2011.
6. The current public safety standards are 1,000 to 10,000 times higher than levels that are now often reported in mobile phone base station studies to cause bioeffects.
7. I am in favor of a SEVERE DECREASE in the current public RF safety limits to protect us from further harm while the long-term effects are studied. In other words, the RF safety regulations should recommend significantly lower limits than they currently do. This seems like the responsible thing to do.

8. We deserve a safety limit that is based on biological effects. I recommend that the FCC encourage Congress to allocate resources to the EPA to establish biologically based radiofrequency radiation safety limits. It is imperative that several nonpartisan long and short term studies should be performed. This will help guarantee public safety in the future and allow a biologically safe limit to be set.

9. As an additional safety measure, I recommend that we restrict future sales of new spectrum, transmitting utility meter installation, and installation of additional base stations for a wireless service while the above recommended studies are ongoing.

Respectfully submitted by

James E. Peden
